Plant Risk Assessment

Self Propelled Boom type Elevating Work Platform

Model: SL26SL

be operated and maintained in accordance with the Manufacturers requirements, and with all applicable statutory and regulatory requirements same specification and design. It assumes all examples of this exact model currently in service to be as per the original specification, and to have been and continue to This Hazard Identification and Risk Assessment document is Model specific. It is based on the knowledge that all new machines of this model were/are produced to the

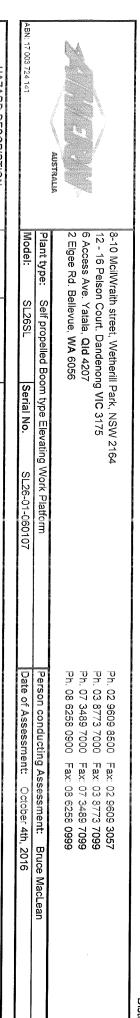

of an original example of the Model for which it was prepared. This Assessment must be reviewed by all stakeholders as required: This Hazard Identification and Risk Assessment document has been prepared based on information available at the time of publication, and on the physical assessment

- o Having regard to the manufacturers approved options
- o According to the particular circumstances under which the plant is used and maintained o Having regard to the general arrangement of miscellaneous equipment or facilities that may be provided on the plant according to the end users requirements or specification
- o As new Hazards are identified and/or as risks are reassessed
- o As existing risk control measures are revised or new risk control measures are introduced and implemented
- o As and when work procedures are altered or revised
- o Having regard to any unauthorised alterations or modifications made to the design or operation of the equipment

Ahern Australia Pty. Ltd. have made every attempt to identify all reasonably foreseeable operating circumstances in preparing this Assessment, however no guarantee as to the completeness of this Assessment is provided or implied

carried out and to where the equipment is to be used or located. They must assess the risk potential for each of the identified hazards and ensure that all reasonably practicable steps are taken to ensure those risks are effectively controlled It is the responsibility of Owners, Employers and Operators to identify all hazards associated with the use of this equipment specifically applicable to the task to be

*Operators of the equipment to which this Plant Risk Assessment refers must read and understand the Instructions for Use and Warnings contained within the Operators Manual prior to use *All operators must be trained and competent in the safe use of this particular piece of equipment, and hold appropriate qualifications as required by applicable regulatory requirements *All Daily Pre-Start Checks, Routine and Periodic Inspections, Maintenance and Repairs to this equipment must be carried out in accordance with the requirements of AS2550.10-2006

56520 0000000000000000000000000000000000	ASSESSMENT	Is it practicable to			CONFIRMATION
GENERAL HAZARDS	O O MICHAEL	Is it practicable to remove or mitigate the risk?	RISK CONTROL MEASURES ALREADY IMPLEMENTED (by Designer, Manufacturer, Importer, Distributor)	SUPPLEMENTARY RISK CONTROL (for action by Management - the person, company or entity legally responsible for the use of the equipment)	Has the necessary action been completed?
Injury - due to use of machine not suitable for the task, and/or operating the equipment without sufficient instruction, training, information or supervision	High	Yes	Operators Manual provides detailed information on use of the machine, including all limitations and associated hazards and risks. Manual warns of use by inexperienced or the operator, and ensure the Operators Manual is with the untrained operators	Prepare a documented system of work ensuring all modes of operation of the machine are covered. Train and instruct the operator, and ensure the Operators Manual is with the machine at all times	
Injury as a result of site specific hazards	High	Yes	General requirements, warnings and list of site specific hazards is detailed in the Operators Manual	Ensure Operators are able to identify all site specific hazards they may encounter and implement actions to ensure they are addressed by appropriate means	
Injury due to inappropriate and/or unauthorised use	High	Yes	Warnings in Operators Manual of the dangers of 'horseplay' and to secure the machine against unauthorised use at the end of each shift. Unit is fitted with a keyswitch for security.	Ensure only trained Operators use the machine and ensure the machine is secured before leaving unattended - remove the key. Do not leave platform elevated when unattended without considering potential wind forces	
Persons injured due to missing, damaged or illegible safety decals and labels	Hig h	Yes	Pre-operational Inspection includes check of decals and Operators Manual provides pictures of each decal for identification	Ensure Pre-operational inspection is carried out as per manufacturers instructions and is recorded in the Logbook provided on the machine. Maintain/replace decals as req'd	
Persons injured due to unrecognised hazards	Нigh	Yes	Preliminary hazard identification is provided in the Operators Manual	Ensure a specific hazard and risk assessment is carried out relevant to the task and environment, prior to operation of this piece of equipment. Ensure all appropriate risk control measures are implemented and adhered to	
Due to failure to observe or rectify safety upgrades from the manufacturer	Extreme	≺es		Ensure the owner of the machine is registered with the manufacturer. Periodically check with the manufacturer for the existence of any safety related bulletins or notifications or upgrades and ensure they are implemented. Ensure the manufacturer is notified when the machine is disposed of.	
Persons could be injured if the unit is operated by persons under the influence of drugs and/or alcohol.	High	Yes	AS2550.10 $-$ 2006 clause 5.2 (p) states that personnel shall not be under the influence of drugs or alcohol.	Ensure that operators do not use the aerial device while under the influence of alcohol or drugs.

	Develop and provide specification for appropriate UV protection and its use. Provide UV protective equipment and instruct operators on the requirements for its use.		Yes	Moderate	Persons could be injured due to exposure to UV.
	Provide specification for appropriate PPE including gloves, safety glasses, hard hat and safety footwear etc as appropriate. Instruct operators on requirements for its use. Ensure PPE is inspected and certified on a routine basis.	Requirement specified in AS2550.10. Warning in Operators Manual regarding wearing PPE appropriate to the task and environment	Yes	High	Persons could be injured if equipment is operated while not wearing appropriate PPE.
	Ensure the unit is operated only in well ventilated areas.	Operators Manual contains warning regarding running the engine and/or charging batteries in well ventilated area	Yes	High	Persons could be injured if the unit is operated indoors without adequate ventilation.
	Ensure that the unit is not operated during storms or if storms may arise when carrying out the required task		Yes	High	Persons could be injured if the unit is operated during storms.
	Instruct the operator to in relation to the sighting of lights.		Yes	Moderate	Persons could be injured if the operator's vision is impaired by sunlight or bright lights in close proximity.
	Implement a system to ensure that operators do not work excessive or continuous shifts and manage peak demands.		Yes	High	Persons could be injured if the operator's performance was inhibited by excessive fatigue.
	Instruct the operator that he/she must report to the supervisor if suffering poor health and safe operating performance could be affected.		Ύes	Ħ.	Persons could be injured if the operator's performance is inhibited by poor health or medication with side effects.

Failure of hydraulic cylinder or hose resulting in uncontrolled platform movement	High	Yes	Cylinder design is in accordance with AS1418.10-2011 requirements. Load holding valves are fitted to cylinders. Routine maintenance checks include load holding valve	Ensure all pre-operational and routine maintenance checks are carried out. Withdraw machine from service if platform does not maintain selected height or if hydraulic leaks	completed?
			operation.	does not maintain selected height or if hydraulic leaks develop	
Injury as a result of high pressure oil jet from hydraulic leak	Moderate	Yes	Operators Manual contains warning to be aware of this	Ensure that personnel are properly trained and aware of the hazards	
Uncontrolled movement due to contamination of hydraulic system	Moderate	Yes	Hydraulic filters are fitted. Maintenance manuals detail service intervals for hydraulic filters and hydraulic oil replacement	Ensure Maintenance manual requirements are carried out	

ELECTRICAL HAZARDS				
Persons could be injured due to contact with or approach to live electrical apparatus	Extreme	Yes	Legislative requirements to maintain minimum approach distances. Decals fitted to platform advise minimum approach distances	Ensure all persons understand and observe the limits of approach. Use only trained and qualified operators
Electric shock due to fault with AC power	<u>I</u>	Ύes	All installations and certifications are performed by suitably	10
Electric shock due to fault with AC power supply	High	Yes	All installations and certifications are performed by suitably Ensure that AC power supplies are appropriately protected qualified personnel	Ensure that AC power supplies are appropriately protected and checked in accordance with legislative requirements
·				

	CECCOCIO 2000. Ose only Offin parts to repair				
	Ensure machine is checked, repaired & maintained by a competent person in accordance with manufacturers checklist provided in manuals and in compliance with	Pre-operational checks of all mechanical and structural components are included in Operators Manual	Ύes	High	Structural failure due to unit being in poor mechanical condition due to fatigue or wear
	Ensure that no modifications or alterations are performed without written consent of the manufacturer. Ensure the machine is secured at the end of each shift and the key is removed	Operators Manual includes warnings prohibiting unauthorised modification or alteration. Keyswitch and Battery disconnect switch are fitted to prevent unauthorised use	Yes	High	Structural failure due to unauthorised modification, alteration, use or interference
	Ensure that Pre-operational checks are performed and documented	Pre-Operational checks detailed in Operators Manual include inspection of these components	Yes	Extreme	Structural failure due to loose or missing pivot pins, retainers and fasteners
	Ensure the machine is not operated near drop-offs or kerbs. Ensure function speeds do not exceed the specifications set out in the Operators Manual. Only trained and experienced Operators are to use the machine	AS1418.10-2011 compliance accounts for the effects of dynamic loads. Proportional controls provide for reduction of function speeds and all controls return to neutral when released. Emergency stop provided.	Yes	H. igh	Structural failure due to dynamic loading, or accidental impact with adjacent structures
West Services	Ensure machine is only operated within the specification and operating parameters detailed in Operators Manual, and in accordance with industry standards and regulatory compliance with AS2550:10-2006. Ensure machine is only operated by trained personnel	Machine is fitted with a Load Sensing System. Decals on platform show maximum capacity and acceptable load combinations. Operators Manual contains warnings against overloading	Yes	H ig z	Structural failure due to overloading
	Carry out all Pre-operational safety checks. Routine and Periodic Maintenance as required by AS2550.10-2006 must be carried out by a competent person. Periodically check with the manufacturer and industry bodies for the existence of any Safety Alerts or Service Bulletins.	Machine is designed, manufactured and tested to comply with requirements of AS1418.10-2011. Design is registered with Workcover NSW and Worksafe Victoria	≺es	I G S	manufacturing fault
